

Oklahoma Wesleyan University

Sports Medicine Department

Pre-Participation Physical Form

All students intending to participate on any of Oklahoma Wesleyan University intercollegiate athletic teams must first complete a pre-participation physical exam before their first practice participation.

Returning upper-class student athletes will continue to have their pre-participation physicals completed on campus before they are eligible to practice.

First year students and transfers are required by University Administration and Student Health to have a complete physical examination and immunization record updated by their family physicians prior to beginning classes. **Incoming students interested in competing in athletics should also take the pre-participation form at the time to be completed by their family physicians.** The physician must check whether physical activities are limited or unlimited. If you have limited activity your physician must specify your limitations.

Please note that the athletic department's pre-participation physical form is different than the college's medical form and that for incoming student athletes **both must be filled out completely and cannot be interchanged.** Payment for the physical examination and immunization will be the responsibility of the parent/guardian and/or student.

Incomplete forms will be returned to the student athlete for completion. After the entire pre-participation physical form has been completed, please mail to: Oklahoma Wesleyan University c/o Curtis Williams Head Athletic Trainer, 2201 Silver lake Road, Bartlesville, OK 74006.

The athletic training staff will then review all pre-participation physical forms and any students with potential physical limitations to full involvement in intercollegiate athletics **may be withheld from participation** until proper clearance from the team orthopedic or other physician is received. All medical history information will remain confidential and will be considered as part of the student's permanent health record with the Student Health Center.
